

Welcome!

The PATHWAY project aims to support young translational scientists in their career in order to keep them motivated to stay in translational research. For all of us 2020 was a strange year. Luckily we have continued and finished the PATHWAY project.

We are delighted to present you the Pathway results!

2020

On november 20th we held our final meeting. During this meeting the impact of the PATHWAY project was discussed with all PATHWAY partners. The partners all agreed on a fruitful collaboration, more awarness of the clinician scientist and a great mentoring programme. All partners agreed to keep on creating awarness for the importance of translational science in the future.

Online course: During the lifetime of the Pathway project, the consortium created an international online course for clinician-scientists/ life-scientists that will be used as a preparation for the Pathway mentorship programme. Check out [this video](#) for further information. We are delighted to inform you that Eureka Institute will take over the ownership of the Pathway mentoring track.

Mentoring: Are you curious how to become a good mentor? What a mentee-mentor relation means? Or you like to set-up a (online) mentorship programme within your own institution? Check out the following implementation handbooks:

- ⇒ [Mentorship Programme Handbook including Mentor Profile](#)
- ⇒ [Professional Development Portfolio for Translational-Scientists \(mentees\)](#)
- ⇒ [Implementation Handbook: for the Mentorship Programme](#)

All these handbooks have been translated to Spanish. The Spanish version can be found on our website.

Educhallenge: A Pathway Educhallenge is a workshop-type session in which a real-life clinical case is discussed from the perspectives of different stakeholders within translational medicine. The topic of the clinical cases vary but are highly complex, include unexpected twists, and demand compromise through fiery debate. The main learning objective is to appreciate other perspectives within the multidisciplinary field of translational medicine and work together towards a common goal. Check-out [this page](#) for further information.

Articles/ papers - will be published soon, keep an eye on our website!

- ⇒ Article on Career Pathways of Translational-Scientists
- ⇒ Letter to the Editor on the Profile of a Clinician-Scientist
- ⇒ Article on EPAs for Translational-Scientists

We wish you all a Merry Christmas and stay save in

2021
